

Lautaro Agustin Rios

Junior Data Analyst

Argentina | +54 3878 690993

Portfolio | GitHub | LinkedIn | lauburo071@gmail.com

PROFESSIONAL SUMMARY

Self-taught Junior Data Analyst skilled in SQL, Python, Power BI, and Excel. Builds end-to-end analyses — from hypothesis validation through executive-ready dashboards — that translate raw business data into measurable, decision-ready insights. Portfolio spans e-commerce, marketing, and subscription-retention analytics, with findings validated against real business questions rather than exploratory analysis alone.

SKILLS

Tools

SQL • Python • Power BI • Excel • Git

Core Competencies

Data Cleaning & Transformation • Exploratory Data Analysis (EDA) • Business Hypothesis Validation • Data Visualization • Dashboard Development • Executive Reporting

FEATURED PROJECTS

E-Commerce Customer Behavior & Revenue Analysis

SQL • Python • Excel • Power BI

- Validated 10 business hypotheses on customer spending, product performance, and revenue concentration across 17,000+ orders
- Identified Electronics as 48% of total revenue and the top 4 cities as 63% of sales, flagging category and geographic concentration risk
- Built a 3-page Power BI dashboard translating findings into engagement, pricing, and inventory recommendations

Marketing Campaign Performance Analysis

SQL • Python • SQLite • Power BI

- Validated 6 business hypotheses on campaign response using customer demographic and behavioral data
- Found prior campaign acceptance predicts future response with up to 6x lift — the strongest signal in the dataset, ahead of income or spend
- Delivered a 4-page Power BI dashboard profiling the highest-probability responder segment for targeted campaign planning

Telco Customer Churn Analysis

SQL • Python • Power BI

- Validated 6 business hypotheses on customer churn across 7,000+ telecom accounts
- Identified a 15x churn differential between month-to-month (42.7%) and two-year contracts (2.8%), the strongest retention lever in the data
- Built a 4-page Power BI dashboard translating churn drivers into a prioritized, first-year-focused retention strategy

EDUCATION

Self-Taught Data Analytics Training — 2025–Present

Focused on SQL, Python, Power BI, and Excel through applied, business-focused projects spanning hypothesis validation, dashboard development, and executive reporting.
